BUSINESS INTELLIGENCE / OPERATIONS ANALYTICS

Operations Performance Dashboard

Cascade Supply Co. | Tableau Public | Synthetic portfolio dataset

PROJECT OBJECTIVE Transform transaction-level sales and fulfillment data into an interactive management dashboard that reveals revenue trends, customer risk, sales-channel shifts, fulfillment problems, and return drivers.

Project Snapshot

TOTAL REVENUE	TOTAL ORDERS	CUSTOMERS
$4.08M	6,245	120
UNITS SOLD	**ON-TIME DELIVERY**	**CANCELLATION RATE**
31,297	87.1%	3.0%

What was the problem?

Cascade Supply Co. relied on transaction-level spreadsheets but lacked a centralized way to understand company performance. Management needed visibility into revenue, order volume, customer behavior, sales channels, delivery reliability, cancellations, and product returns. The challenge was not simply to visualize the data, but to define trustworthy KPIs and create a dashboard that supported management decisions and root-cause investigation.

What did I do?

- Audited and validated the source data, including dates, categories, missing values, revenue calculations, and order-level versus line-level grain.
- Defined business KPIs with the correct level of detail, including distinct orders, delivered units, average order value, on-time delivery, cancellation rate, fulfillment time, shipping time, and product-line return rate.
- Built three interactive Tableau dashboards: Executive Overview, Sales & Customer Analysis, and Operations & Fulfillment.
- Added date filters, dashboard actions, click-to-filter exploration, and business-friendly tooltips to support deeper analysis without overcrowding the dashboards.
- Analyzed the finished dashboards and translated patterns into management findings, business impacts, and recommended next actions.

Tools Used

Tableau Public	Excel	Calculated Logic	Business Analysis
Web authoring, calculated fields, LOD expressions, dashboards, filters and actions	Source-data audit, validation and working-file review	COUNTD, date logic, percentages, order/line-grain KPI definitions	Trend analysis, segmentation, root-cause investigation and recommendations

What did the analysis uncover?

CUSTOMER RETENTION RISK Northstar Health Systems, the highest-revenue customer over the reporting period, reduced purchasing sharply after March 2026. Only 6 orders totaling about $7.8K were placed from April through August.	**REGIONAL GROWTH** The Northeast became the highest-revenue region in each of the final three months, with June-August revenue about 78% above January-March.
FULFILLMENT GAP The South region fell to about 76.7% on-time delivery in 2026, roughly 9.5 percentage points below the next-lowest region while also handling the highest order volume.	**CHANNEL SHIFT** Online increased from about 35.4% of Jan-Aug revenue in 2025 to 49.6% in the same period of 2026, while Sales Rep share declined.
CANCELLATION SPIKE Company cancellations increased sharply in April-May 2026, with the South reaching approximately 8.0% and 11.1% before returning closer to normal levels.	**RETURN CONCENTRATION** Damage in transit was the largest return reason, and Technology carried the highest category return rate at approximately 8.5%, indicating a targeted packaging/product-quality opportunity.

How is this useful to prospective clients?

This project demonstrates an end-to-end analytics workflow: understanding raw operational data, validating its quality, defining business metrics, building an interactive BI solution, and converting the results into actionable management recommendations. For a prospective client, the value is not just a polished dashboard - it is the ability to turn routine operational data into a repeatable decision-support system that highlights risks, growth opportunities, and areas requiring investigation.

Skills Demonstrated

Data auditing • KPI design • Tableau calculated fields • Level-of-detail logic • Dashboard design • Interactive filtering • Data visualization • Trend analysis • Customer analysis • Operations analytics • Root-cause investigation • Business recommendations

PORTFOLIO VALUE Shows the ability to move from clean data to analysis, interactive BI reporting, and management-ready recommendations - the same workflow a small business or operations team could hire an analyst to deliver.
